INKY ®
Phish Free

Office 365 | Exchange | G-Suite

INKY is a cloud-based email security solution that blocks spam, malware, and — most importantly — phishing attacks. Utilizing computer vision, artificial intelligence, and machine learning INKY catches everything. Driven, curious, mobile, and growing smarter by the subject line, INKY adds a thin—but powerful— layer of protection like no other.

PROTECT AND TRAIN
Warning banners appear directly in the email, offering guidance for suspicious emails.

DEPLOY EFFORTLESSLY
Integrates into Office 365 organization-wide within minutes, Exchange, and G Suite compatible.

USER-FRIENDLY WARNINGS
Safe/Unusual/Malicious warnings let users know how to safely treat the email.
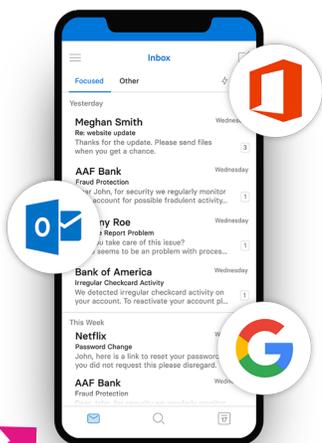

SIMPLE TO ADMINISTRATE
Our advanced dashboard gives you complete visibility, tracking into threats being blocked.

"Email phishing is still the world's biggest cybersecurity threat. INKY's next-generation solution is easy to administer but catches phishing attempts that other solutions miss."

*- CEO of a major manufacturing organization*

INKY Is The Next Generation of Email Protection

The challenge of phishing is daunting, we want the solution to appear simple. From the classifier model that powers INKY's machine learning to the elegantly intuitive design of the banner, everything we do is designed to orient and empower our users.

✓ All incoming mail is automatically checked against over two dozen computer vision and text analysis models that "see" the message much like a person would — so even very convincing forgeries get blocked.

✓ Protects against both spear phishing and brand forgery attacks.

✓ Deploys organization-wide in 1-2 hours.

✓ Works with any mail client, on any device.

✓ "Report Phish" link in the mail sends the mail to your SOC.

✓ HTML sanitization blocks XSS, JavaScript, CSS attacks

✓ Real-time analysis engine does not slow down mail delivery.

Email is protected on desktop and mobile.

Banners offer guidance.
